09.04.2025

PHP Branch Team:

- Móni (Scrum master)
- Zsuzsi
- Ray
- Áron

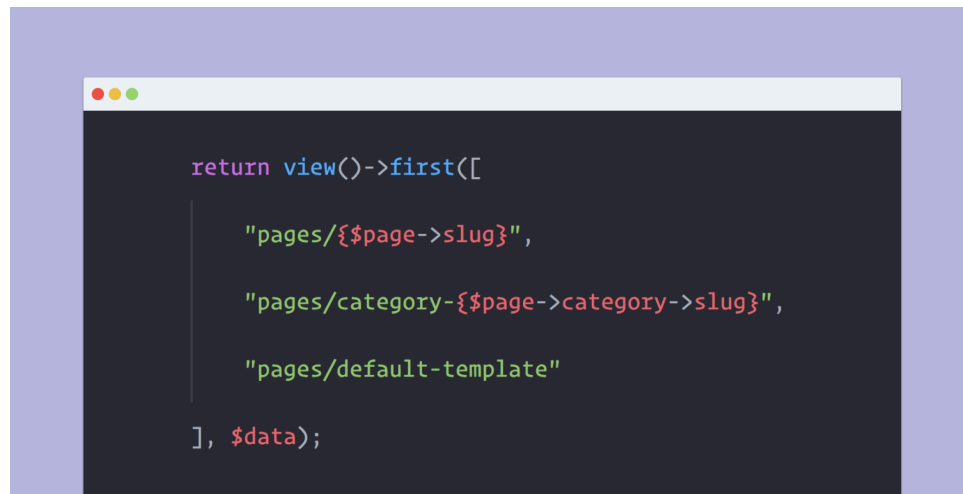

Backend

The main backend technology is going to be the Laravel framework written in PHP.

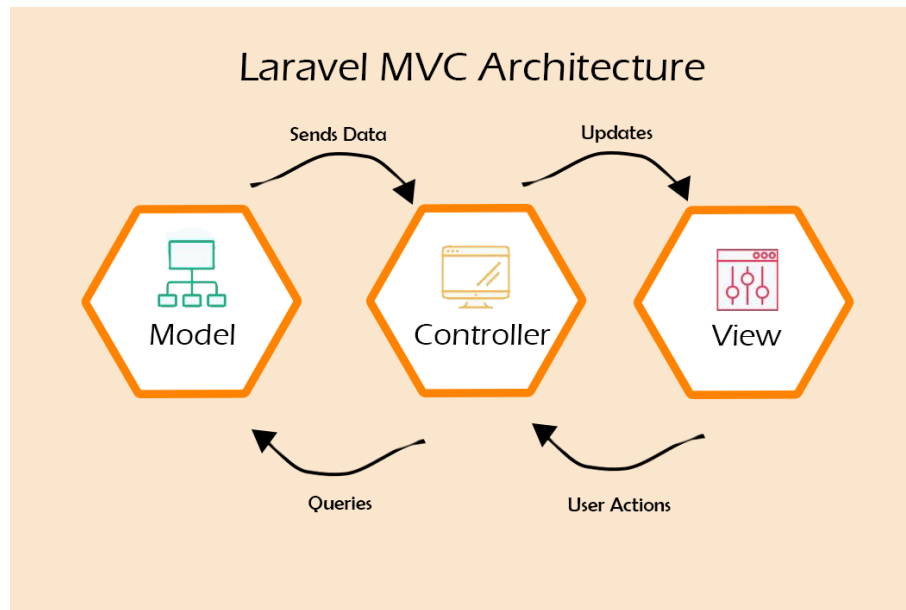

Frontend

We are going to use the Blade Template Engine for the frontend.

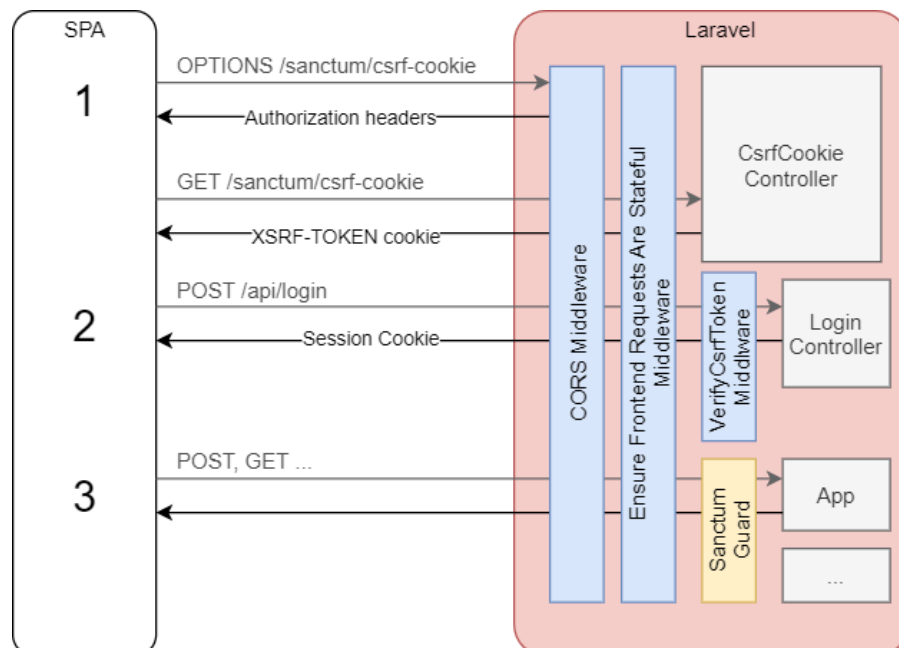

Architecture

We are going to use an MVC architecture using Laravel:

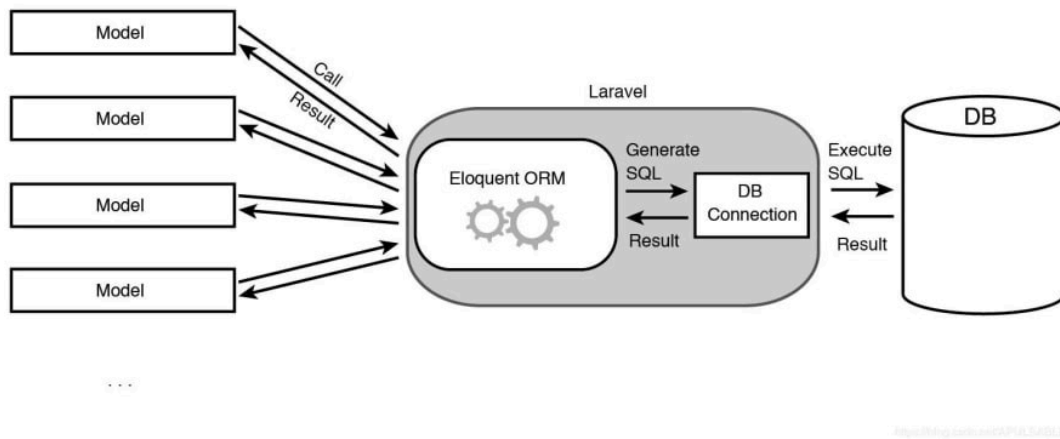

Authentication is done via Laravel Sanctum:

Database

MySQL relational database accessed by Laravel Eloquent ORM:

Major features

- **Authentication**
Users can register and login to the site.
- **Workout plans**
There are several plans available for the users to choose from.
- **Content access middleware (backend based):**
Redirects feature routes to the subscription page based on availability. Ensures the user can't hack the client to access features not included in their tier.
